Perdigao attribution v1.1: failure report (no attribution claim)

run_id 2026-10-12T132705+0000_p6fail / protocol 381b0422f96b7c6e / internal freeze (no OSF) / DOI 10.26023/ZDMJ-D1TY-FG14

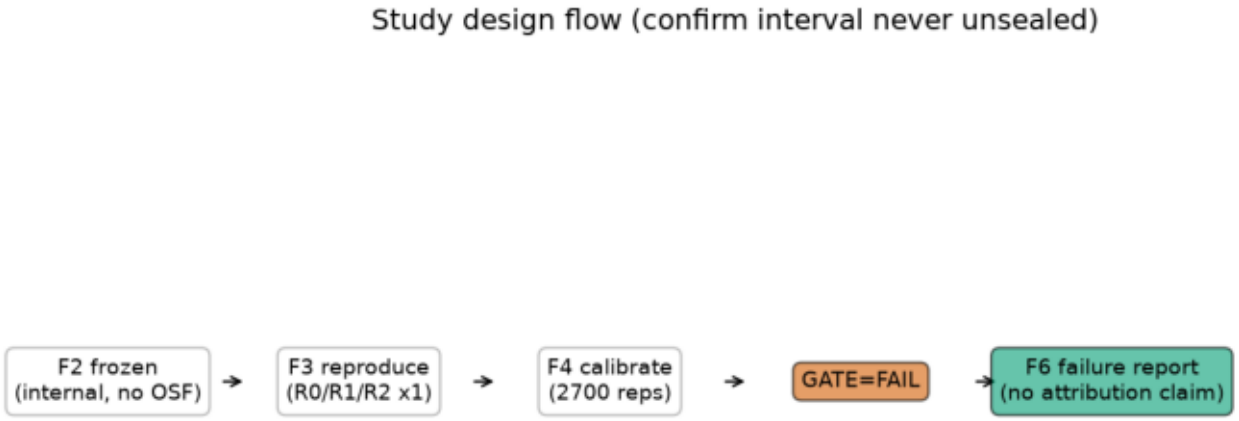

Conclusion: the attribution instrument did not qualify, and the attribution verdict on real data is withheld. Gate FAIL on 2700 valid semi-synthetic reps (core4x1, R+Xp fix, 100-sham): detection 0.09-0.41 (SNR0.5) / 0.11-0.73 (SNR1.0) vs bar 0.80; FP<=0.01 vs bar 0.075. Confirm interval sealed; no primary fit. Raw: 175 NetCDF, 527015036 bytes; tower tse13; SESOI 0.008862.

結論：帰属測定系または実装監査が不合格であり、実データの帰属判定を保留した。

Authoritative version: reports/final_report.md (Japanese). This PDF is a print record.

calibration_bars.png / protocol 381b0422f96b7c6e / DOI 10.26023/ZDMJ-D1TY-FG14

Study design flow (confirm interval never unsealed)
F2 frozen (internal, no OSF)
F3 reproduce (R0/R1/R2 x1)
F4 calibrate (2700 reps)
GATE=FAIL
F6 failure report (no attribution claim)
